

PcVue and Passivhaus, monitoring an ultra-low-energy building

This trend-setting building comprises a clinic for physiotherapy and medical muscle-building plus the offices of the builder, Steffen Holzbau. All of the efficiency systems are monitored from a PcVue BMS system with remote WebVue access linked to BACnet controllers and communication. As a specialist in design of wooden buildings, Steffen Holzbau planned and built the facility in cooperation with Sanichauer based in Luxembourg - where the building is situated - and the contractor GIGA-Automation of Saarbrücken in Germany.
